HOUSING FOR THE HOMELESS

- Economical (<\$1,000 each) housing alternative for displaced people due to natural disasters and war.
- Provides safety from the elements and dignity to those that have lost their home.

Each shelter holds up to 10 people

- Efficient to ship (100 units per container)
- Light Weight (Less than 200 lbs)
- **Easy to assemble** and reassemble (no tools needed) 5 pieces that only require 5 people 15 minutes to assemble
- Stakes and Cables provided for extra stability. Can be anchored into any terrain. Bottom floor available.

Polyurea Strength

- Made of revolutionary polyurea technology with inner layer strength board that is bonded together to offer a warm, dry, insulated and **waterproof** structure
- 2,500 tensile strength makes the house strong and durable yet lightweight and flexible
- Resistance to impact and abrasion: 150 lb man can walk on the structure and it remains unaffected.
- Able to withstand worldwide extreme weather conditions—sandstorms, snow and rain

Same technology used to protect the U.S. Pentagon roofs

- Similar technology used in new Anti-Ballistic building wraps
- Long lasting (lifetime of up to 1 year)
- Prepared to ramp up production for crisis (Quick turn around)
